

# Is There a Right Way for Your Child to Learn About Computers?

**YES!!!**

**Make It Fun!**

## Give Individual Attention

Classes have a maximum of 4 students and are offered in your child's school.

## Provide Great Teachers

Our Teachers are academically trained to teach and to encourage young children.

## Utilize the Computer as a Tool

Our curriculum is developed by professional educators who know what, how and when children best learn both academic and technical skills. Students learn both at the same time.

## Learn How to Learn

Students routinely engage in the learning of new software titles. The variety and challenge nurtures confidence & curiosity in the learning of "new things."
